Foreword

The variety recommendation sheets with geographical locations (maps) were created since 1996, and published on the MSIRI website. Its objective is to enable sugarcane planters to choose the varieties best adapted to their environment. The series is organized according to the factory areas' plan defined by Sugar Insurance Fund Board (SIFB). Each sheet represents a factory area, showing the soil families and the main villages in which they are located, together with a table showing the recommended varieties .

As the variety lists are continuously updated by adding newly released varieties, and phasing out the older ones, this spatial format of recommendation sheet is updated every 3 to 5 years. In this series, the recommendation sheet 190 (MSIRI, 2016) is translated into pictorial representation of maps, with related tables showing the latest recommended varieties. Thus, both the extension officers of Farmers Service Agency (FSA) and the planters get direct access to the list of recommended varieties adapted to their area.

We express our sincere thanks to Farmers Service Agency (FSA), in helping us to disseminate the research results to the sugarcane planters community for a better production.

Thanks also to Mr. Yash Ramdharee, Manager, FSA , for co-ordinating the publication, and to Ms. E. Sanassy, who helped to update this series of recommendation sheets, during her training attachment.

Data sources: 1. Recommendation sheet No. 192 (MSIRI-MCIA, 2019)

Map sources: 1. 1:100,000 SIFB Factory Area Plan (SIFB, 1995)
2. 1:100,000 Provisional Soil map of Mauritius (Parish & Feillafe, 1962)
3. 1:25,000 Topographic maps of Mauritius (Government of Mauritius, 1975)
4. Pleiade satellite image (CNES/Airbus, 2013)
5. Satellite images (Digital Globe, CNES/Airbus, 2017) from Google Earth.
